Acknowledgment

First and foremost, we would like to thank our professors as well as all those who gave us the chance to accomplish this project. A particular thank you goes out to our Teacher Sir Asad Ali, whose aid, stimulating suggestions, and encouragement encouraged us to work together on our project. We also want to express our gratitude to our loving parents, whose good intentions enabled us to materialise our vision and idea..

We are pleased to place the project "Corelaw" in your hands. We attempted to think of everything so that this project may be more successful and have a brighter future. We really hope that this project will give all of the essential information for the user to meet their needs.

However, recommendations for project enhancement will be gratefully accepted.

Problem Statement

Introduction:

Everyone nowadays requires legal services for one reason or another. It is quite difficult to locate lawyers with the appropriate specialty. Obtaining an appointment is also challenging. All of this necessitates the creation of a website.

Proposed Solution:

We need to create a website for attorneys and their services. Customers can register and search for lawyers based on their specific needs. Customers will be able to browse through and examine the profiles of attorneys on the website before contacting them.

Customers can schedule a meeting with a lawyer. We also had a chat about a few clarifications and contributions to better understand the project flow.

Features:

- Registration for customer as well as lawyers.
- Panel for lawyers showcasing their details.
- Search by lawyer location, lawyers services like criminal, divorce, affidavit, civil and then schedule a meeting with the same.
- A customer search will show minimal info of a lawyer related to the service which customer searches, a click on a lawyer profile, where in customer can schedule a meeting and book a slot.
- Login through normal registration form for customer is mandatory and for a lawyer registration form is required. Basically user/password required.
- Showcase of the lawyer when they search one by one.

User Type:

- Admin: To manage information that will seen in homepage and manage lawyer profiles need to be seen for searches . Manage schedules and appointment booking slots.
- Customer: To search for lawyer services based on requirement.

Module Details:

- Customer / Lawyer registration.
- Panel for lawyers.
- Search by lawyer location, lawyer services like criminal, divorce, affidavit, civil and then meeting place.
- View Lawyer profiles / Book Appointments.
- Login through normal registration form for customer in mandatory and for a lawyer registration form is required. Basically user/password is required.
- Showcase of the lawyer when they search one by one.
- Admin Pages
